

Press Release

February 26, 2015

4:00 PM

The Middletown Water Department is experiencing low water pressure conditions in a number of areas, primarily in the area north of Washington Street and east of East Street (RT 217). Crews from the Water Department are currently on scene and are attempting to isolate the break to restore pressure. These efforts are currently being hampered by off road isolation valves that are buried by snow.

The focus of the break appears to be in the neighborhood of Aspen Drive, Tupelo Road and Congdon Street.

Additional information will be made available as a more complete assessment can be made.
